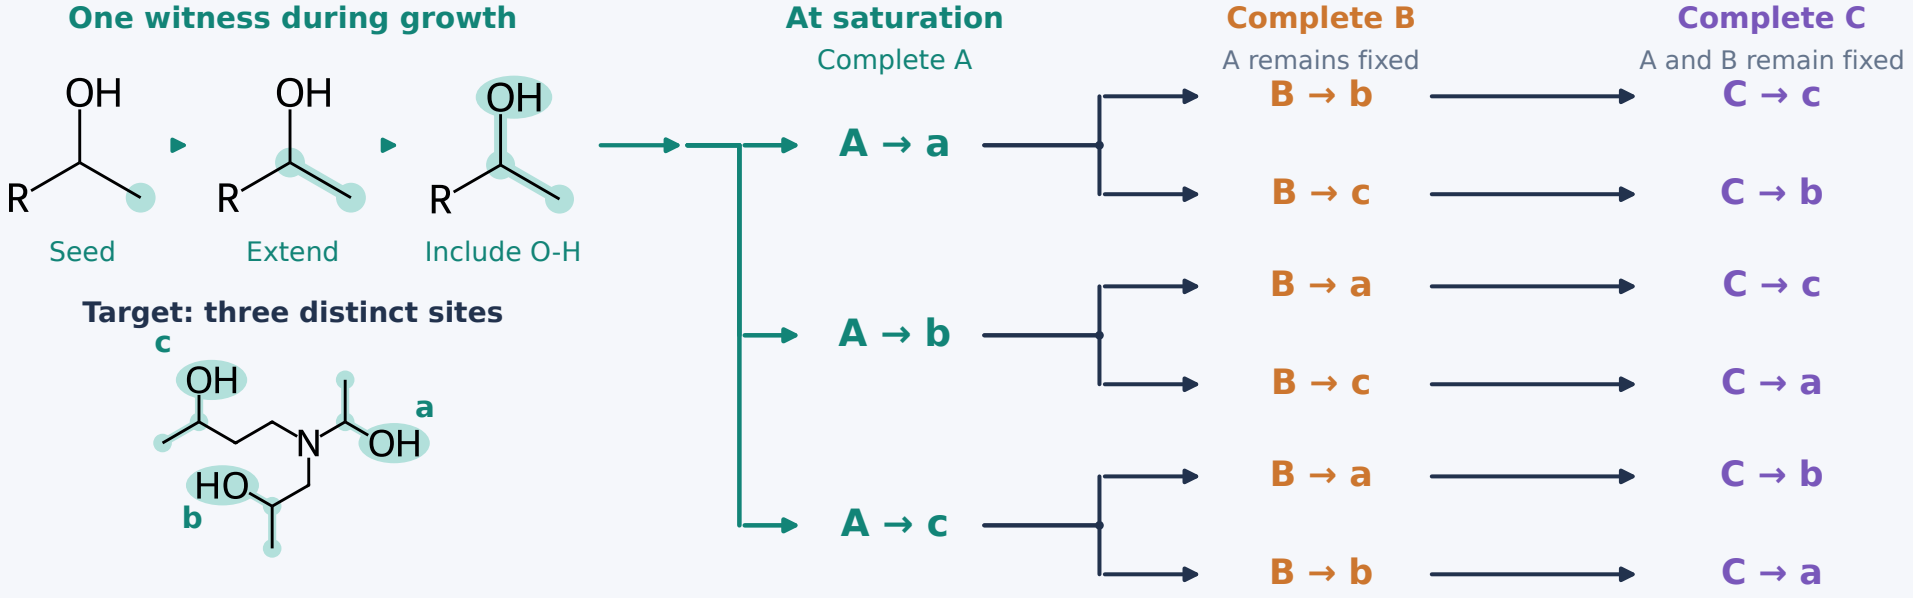
a MAPPA matching: grow, complete and branch

A, B and C are successive local alcohol fragments; R lies outside the matched motif.

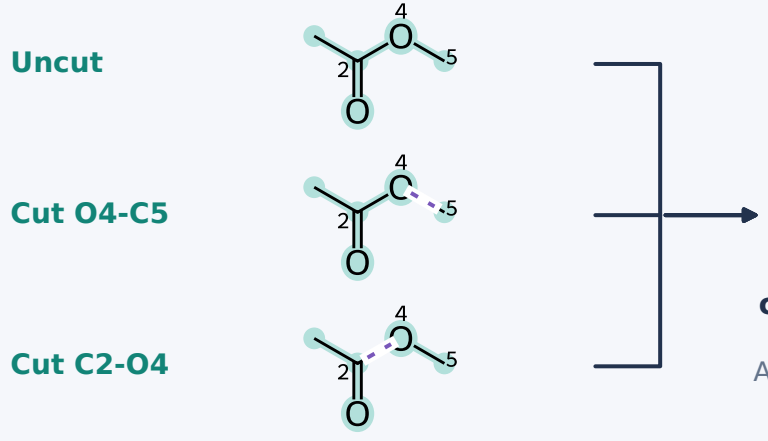


C-C, C-O and every attached H are checked.

Three placements → two unused sites → one remaining site

b Explore cuts; collect the retained families

Methyl acetate: three source conditions are shown.



Merge repeated families; retain their constraints.

c Decode shared fragments and boundaries

Use original bond weights and the saved joint choices.
