a MAPPA matching: grow, complete and branch

A, B and C are successive local alcohol fragments; R lies outside the matched motif.

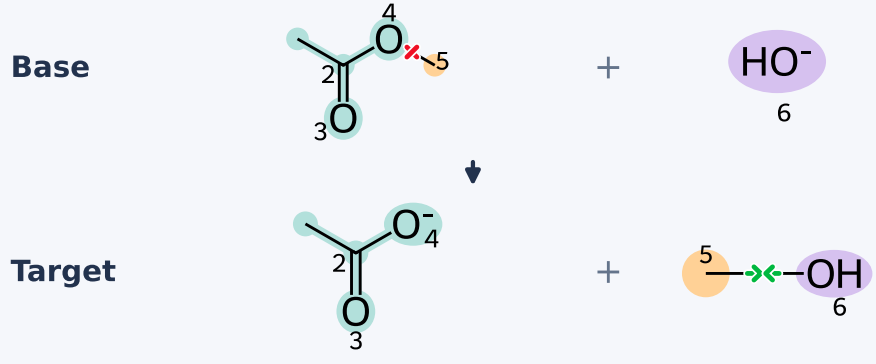

C-C, C-O and every attached H are checked.

Three placements → two unused sites → one remaining site

b Matching output: paired fragments

The same color pairs atoms across the two endpoints.

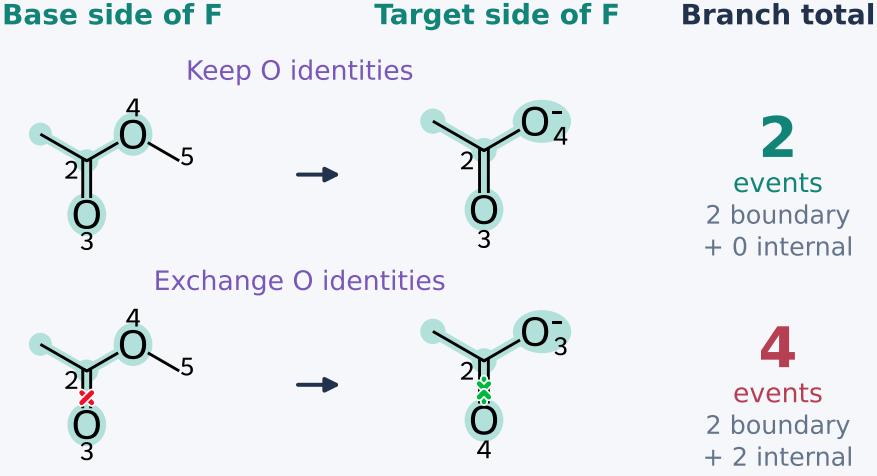

2 boundary events: break 4-5; form 5-6.

Share repeated fragment pairs across seeds and cuts.

c Decoding: compare both sides of F

Binary-connectivity automorphism permits the O3 / O4 swap.

Only highlighted atoms belong to F; C5 is outside F.

Matching / correspondence

Numbers follow base atom identities

Break / weaken

Form / strengthen
