a MAPPA placements: earlier choices condition later placements

Local alcohol fragments A, B and C share this motif; R lies outside the matched atoms.

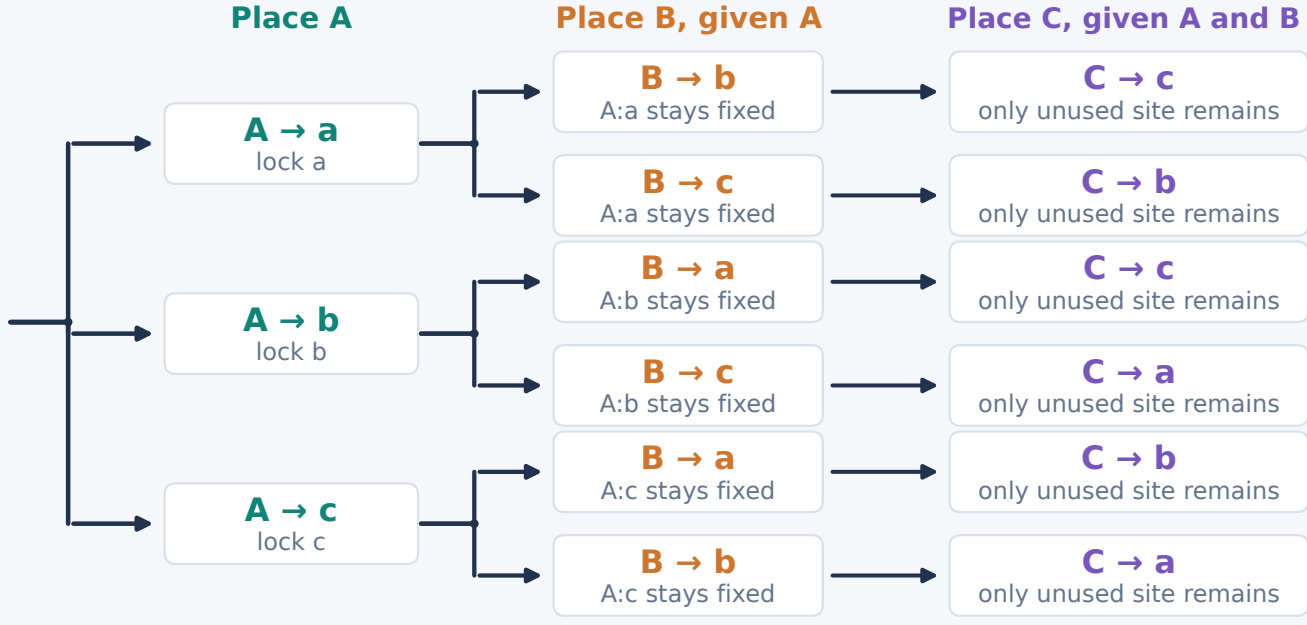

Seed **Grow** **Match O-H**

Three distinct target sites

Each site preserves C-C, C-O and O-H.

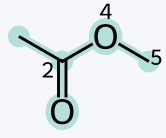

Each path is a joint assignment; occupied target atoms cannot be reused.

b Vary the constraints with a cut sweep

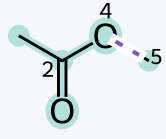

Methyl acetate: three illustrated source conditions

Uncut source

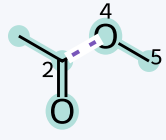

→ Grow

Mask O4-C5

→ Grow

Mask C2-O4

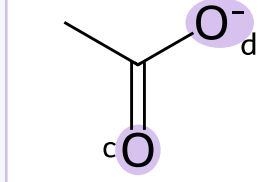

→ Grow

Pool the retained branches; decode on original bond weights.

c Local events within a family

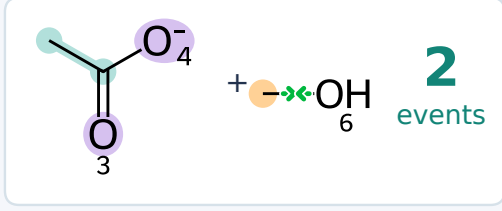

The oxygen exchange preserves matching at $\tau_{iso} = 1$

Matching symmetry

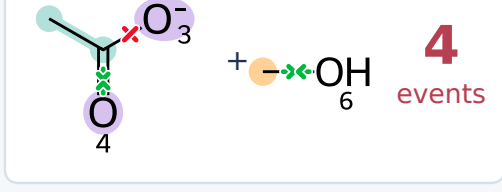

$g = (c\ d)$

One branch
correlated alternatives

Exchange O3 / O4
