a MAPPA matching: grow, complete and branch

A, B and C are successive local alcohol fragments; R lies outside the matched motif.

Grow on base; keep one witness

Target: three distinct sites

At saturation

Complete A

Complete B

A remains fixed

Complete C

A and B remain fixed

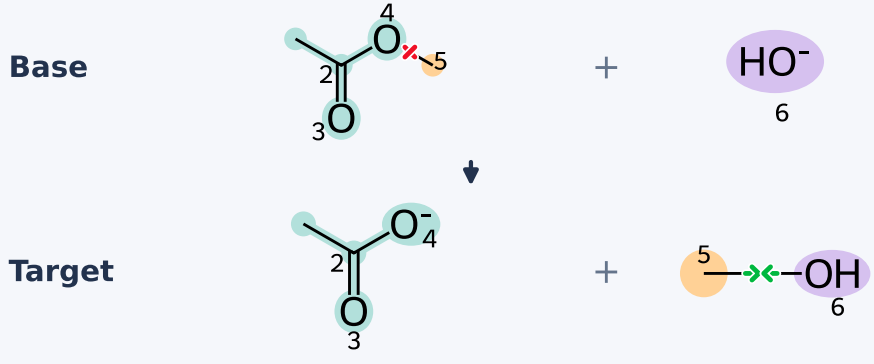

- A → a
  - B → b → C → c
  - B → c → C → b
- A → b
  - B → a → C → c
  - B → c → C → a
- A → c
  - B → a → C → b
  - B → b → C → a

C-C, C-O and every attached H are checked.

Three placements → two unused sites → one remaining site

b Matching output: paired fragments

The same color pairs atoms across the two endpoints.

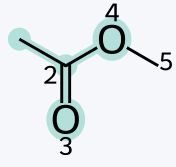

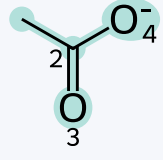

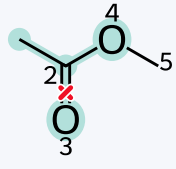

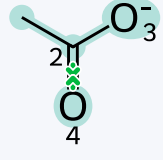

One branch: F + G + H

2 boundary events: break 4-5; form 5-6.

Share repeated fragment pairs across seeds and cuts.

c Decoding: compare both sides of F

Same fragment pair; two allowed oxygen assignments.

Base side of F	Target side of F	Branch total
Keep O identities		
		**2** events 2 boundary + 0 internal
Exchange O identities		
		**4** events 2 boundary + 2 internal

Only highlighted atoms belong to F; C5 is outside F.

Matching / correspondence

Numbers follow base atom identities

Break / weaken

Form / strengthen
